

DUCT CLEANING SERVICES

By their very design, air ducts create an environment that is conducive to mold growth. The dust, dander, and organic debris that collect within the dark, often damp confines of ductwork provide a steady food source for mold and other fungi and bacteria. By eliminating this food source, mold can be prevented from thriving in your air ducts. Having ductwork cleaned on a regular basis (usually every 3-5 years, although in some cases it should be done more often), the indoor air quality of a home or business can be drastically improved. This means that allergy and sinus symptoms can be greatly reduced, as other problems including respiratory difficulties, sinus problems, and certain skin afflictions.

In-Spect uses patented video-assisted technology to clean air ducts providing us with unparalleled effectiveness when cleaning this difficult to see environment. Our video inspection system allows us to see the inside of the ductwork before, during, and after cleaning, ensuring that the process is done properly the first time around. When the situation permits, our Video-Aire® machine documents the cleaning process as it is being performed, and also ensures that the operator does not miss any deposits of dust, dander, or other debris. Our Viper Clean Sweep 2 system allows us to reach areas that are not accessible to other equipment, meaning that we are able to reach dirt and debris that gets left behind by other cleaning methods. Don't be fooled by '\$99 duct cleaning specials' that are offered by other companies. Let In-Spect clean your ducts properly, using negative airflow to ensure that no contamination, dirt, dander, or debris is spread through your ductwork, but is actually physically removed. Our optional duct sterilizer service actually traps any residual microbes inside of the ducts and renders them lifeless and unable to spread further. Let In-Spect clean your ducts properly, and see and feel the difference clean air can make.
